# MIGRATION PROTOCOL

OFFICIAL CLIENT DOCUMENTATION

## 🛡 1. The "Zero-Risk" Guarantee

**You are not losing your domain.** Moving to a new website does not mean starting over. Your Google Reviews, SEO history, and Email archives are safe.

**The Analogy:** Think of this like upgrading your mobile phone. We are simply swapping the "SIM Card" (The DNS Records) to a new, faster device (The Vercel Server). Your phone number (Domain Name) and Contacts (Email) stay exactly the same.

⚠ **CRITICAL WARNING: Do Not Touch Email Settings**
When editing your settings, you will see records labeled **MX (Mail Exchanger)**.
**NEVER delete or edit these.** These control your email inbox. We only touch the "A-Record" (Website).

## 🖳 2. Configuration Steps

### Step 1: Locate DNS Settings

Log into your provider (IONOS, GoDaddy, Wix, etc).

Navigate to **Domains → Manage DNS** (or "DNS Zones").

### Step 2: Update the 'A-Record'

Find the record with Type **A** and Host **@**.

| Type | Host / Name | Value / Points To | TTL |
|------|-------------|-------------------|-----|
| A | @ | 76.76.21.21 | Auto / 1h |

*Note: If you are using Wix/Squarespace, you may need to delete their default records first.*

### Step 3: Update the 'CNAME'

Find (or Add) the record with Type **CNAME** and Host **www**.

| CNAME | www | cname.vercel-dns.com | Auto |
|-------|-----|----------------------|------|

**Need "White Glove" Support?**
We can handle this login process for you securely.
